IB Pseudocode Syntax

Basic instructions

Name	Syntax	Description	Examples
Assign	variable = value	Assigns a value to the	a = 1
		variable	
Input	input <i>variable</i>	Inputs the variable	input a
Output	output	Outputs a value of the	output <mark>a</mark>
	variable/expression	variable or expression	output "hello"
			output 2 + 2
Create	create <i>type variable</i>	Creates the variable	create Boolean a
		with standard value of	create Number b
		given type	create String c
Delete	delete <i>variable</i>	Deletes the variable	delete <mark>a</mark>

<u>Conditions</u>

Name	Syntax	Description	Examples
If	if <i>condition</i> then	Indicates the start of a condition block and states the first condition	if a = 1 then
Else if	else if <i>condition</i> then	States an additional condition	else if a = 2 then
Else	else	Indicates the start of the part of a condition block which will be executed if all conditions above are false	else
End if	end if	Indicates the end of a condition block	end if

Loops

Name	Syntax	Description	Examples
While loop	loop while <i>condition</i>	Executes a loop block while the condition is true	loop while a < 5
Until loop	loop until <i>condition</i>	Executes a loop block until the condition is true	loop until a = 5
For loop	loop variable from start value to end value	Executes a loop block for every value of the variable between start	loop a from 1 to 5
	loop for variable from start value to end value	value and end value	loop for a from 1 to 5
End loop	end loop	Indicates the end of a loop block	end loop

<u>Operators</u>

Name	Syntax	Description	Examples
Equal	value1 = value2	Checks is the first	a = 1
		value equal to the second	
Not equal	value1 != value2	Checks is the first	a != 1
· ·	value1 <> value2	value not equal to the	a <> 1
		second	
Greater	value1 > value2	Checks is the first	a > 1
		value greater than the	
		second	
Greater or	value1 >= value2	Checks is the first	a >= 1
equal		value greater or equal to the second	
Less	value1 < value2	Checks is the first	a > 1
Less	vatuel \ vatue2	value less than the	a / 1
		second	
Less or equal	value1 <= value2	Checks is the first	a >= 1
		value less or equal to	
		the second	
Not	NOT value1	Executes logical or	NOT a
		bitwise NOT for the	
		value	
And	value1 AND value2	Executes logical or	a AND 1
		bitwise AND for the	
		first and the second values	
0r	value1 OR value2	Executes logical or	a OR 1
01	vataci on vatacz	bitwise OR for the	a on i
		first and the second	
		values	
Xor	value1 XOR value2	Executes bitwise XOR	a XOR 1
		for the first and the	
		second values	
Addition	value1 + value2	Adds the first and the second values	a + 1
Subtraction	value1 - value2	Subtracts the first	a - 1
		and the second values	
Multiplication	value1 * value2	Multiplies the first	a * 1
		and the second values	, ,
Division	value1 / value2	Divides the first and	a / 1
Module	value1 mod value2	the second values Gets modulo of the	2 mod 1
Modulo	vatuel mou vatuel	first and the second	a mod 1
		values	
Integer	value1 div value	Gets integer part of	a div 1
division		the division of the	
		first and the second	
		values	

<u>Functions</u>

Name	Syntax	Description	Examples
Function	function <i>name(arg1,)</i>	Indicates the start of	<pre>function f(a, b)</pre>
		a function block with	
		name and arguments	
Return	return	Returns value or	return a
	variable/expression	expression from	return "hello"
		function	return 2 + 2
End function	end function	Indicates the end of a	end function
		function block	
Run function	name(arg1,)	Runs a function block	f(1, 2)
		with given name and	
		arguments	

<u>Procedures</u>

Name	Syntax	Description	Examples
Procedure	procedure <i>name(arg1,</i>)	Indicates the start of	procedure p(a, b)
		a procedure block with	
		name and arguments	
End	end procedure	Indicates the end of a	end procedure
procedure		procedure block	
Run	name(arg1,)	Runs a procedure block	p(1, 2)
procedure		with given name and	
		arguments	

Basic data types

Name	Syntax	Description	Examples
Boolean	variable = true	Boolean type that can	a = true
	variable = false	contain only true or	b = false
	create Boolean <i>variable</i>	false values	create Boolean a
	Boolean <i>variable</i>		Boolean a
Number	variable = 0	Number type that can	a = 0
	create Number <i>variable</i>	contain any number	create Number a
	Number <i>variable</i>	value	Number a
String	variable = "text"	String type that can	a = "hello"
	create String variable	contain any text	create String a
	String variable		String a

<u>Arrays</u>

Name	Syntax	Description	Examples
Create array	create Array <i>name</i>	Creates an empty array	create Array a
	Array <i>name</i>	with given name	Array a
Get item	name[index]	Returns an item with	a[0]
		given index from the	
		array	
Set item	name[index] = value	Assigns a <mark>value</mark> to	a[0] = 1
		given index from the	
		array	
Array size	<pre>name.size()</pre>	Returns a size of the	<pre>a.size()</pre>
		array	
Assign array	name = [val1, val2, …]	Assigns an array with	a = [1, 2, 3]
		given values to a	
		variable	

<u>Dictionaries</u>

Name	Syntax	Description	Examples
Create	create Dictionary <i>name</i>	Creates an empty	create Dictionary
dictionary		dictionary with given	a
	Dictionary <i>name</i>	name	Dictionary a
Get item	name["key"]	Returns an item with	a["a"]
		given key from the	
		dictionary	
Set item	name["key"] = value	Assigns a value to	a["a"] = 1
		given key from a	
		dictionary with given	
		name	
Assign	name = {"key1": val1,	Assigns a dictionary	a = {"a": 1, "b":
dictionary	"key2": val2,}	with given values to a	2}
		variable	

<u>Collections</u>

Name	Syntax	Description	Examples
Create	create Collection <i>name</i>	Creates an empty	create Collection
collection		collection with given	a
	Collection <i>name</i>	name	Collection a
Add item	name.addItem(value)	Adds a value to the end	<pre>a.addItem(1)</pre>
		of the collection	
Get next	<pre>name.getNext()</pre>	Returns next value from the collection	<pre>a.getNext()</pre>
Reset next	<pre>name.resetNext()</pre>	Resets next element of	<pre>a.resetNext()</pre>
		the collection	
Has next	<i>name</i> .hasNext()	Checks does the	<pre>a.hasNext()</pre>
		collection have next	
		element	
Is empty	<pre>name.isEmpty()</pre>	Check does the	<pre>a.isEmpty()</pre>
		collection contains	
		elements	
Collection	<pre>name.size()</pre>	Returns a size of the	a.size()
size		collection	

<u>Stacks</u>

Name	Syntax	Description	Examples
Create stack	create Stack <i>name</i>	Creates an empty stack	create Stack a
	Stack <i>name</i>	with given name	Stack a
Push	name.push(value)	Adds a value to the	a.push(1)
		stack	
Рор	<pre>name.pop()</pre>	Gets a value from the	<pre>a.pop()</pre>
		stack	
Is empty	<pre>name.isEmpty()</pre>	Check does the stack	<pre>a.isEmpty()</pre>
		contains elements	
Stack size	name.size()	Returns a size of the	a.size()
		stack	

<u>Queues</u>

Name	Syntax	Description	Examples
Create queue	create Queue <i>name</i>	Creates an empty queue	create Queue a
	Queue <i>name</i>	with given name	Queue a
Enqueue	<i>name.</i> enqueue(<i>value</i>)	Adds a value to the	<pre>a.enqueue(1)</pre>
		queue	
Dequeue	<i>name</i> .dequeue()	Gets a value from the	<pre>a.dequeue()</pre>
		queue	
Is empty	<pre>name.isEmpty()</pre>	Check does the queue	<pre>a.isEmpty()</pre>
		contains elements	
Queue size	name.size()	Returns a size of the	a.size()
		queue
